Problem

Q)The distribution of ax + b.

Solution

Let y = ax + b

To find $F_{\nu}(y)$, we must find the values of x such that $ax + b \leq y$.

• a) if a > 0, then $ax + b \le y$ for $x \le \frac{y-b}{a}$. Hence

$$F_{y}(y) = P(x \le \frac{y-b}{a}) = F_{x}(\frac{y-b}{a}), \quad a > 0$$
 (1)

• b) if a < 0, then $ax + b \le y$ for $x > \frac{y-b}{a}$. Hence

$$F_y(y) = P(x \ge \frac{y-b}{a}) = 1 - F_x(\frac{y-b}{a}), \quad a < 0$$
 (2)
